Able Moving and Storage Environmental Health and Safety Overview

Executive Statement: “We will, in our work, keep a mindset of sustainability and environmental health. We will make every effort to Reduce, Reuse and Recycle, without compromising the safety of our employees and our clients or the quality of our services.”

Summary of Environmental Health and Safety Initiatives: Able Moving & Storage, Inc. provides many opportunities for businesses to discard used furniture, products, equipment, construction debris, chemicals, paints, and other items instead of throwing them away, thus decreasing the negative impact on area landfills. This minimizes the expense and potential risks for our clients.

Investing In Our Environment

Clean Air Solutions: Able Moving and Storage Inc. has re-investing over 1.5 million dollars in our fleet over the past 5 years to bring our equipment up to date. We use Certified Idle Clean Diesel Fuel trucks only to further our mission of sustainability and environmental health.

Sustainable Solutions

Reduce: Able Moving and Storage provides customers with a solution that is cost effective and environmentally friendly in reducing the quantity of items being moved. Reducing the quantity of items involved in a corporate move can have a positive impact on reducing moving costs.

Reuse: Able Moving and Storage is committed to diverting the amount of excess waste that is sent to local landfills. We work closely with companies and individuals who agree that one of the key solutions to protecting our environment is the potential for reuse. Able is working to encourage businesses and individuals to “give it away,” rather than throwing it away.

Recycle: If items cannot be reused, Ables next objective is to recycle the material to reduce the impact on landfills, and to put these raw materials back into production. Able has many qualified downstream resources to handle this process safely and efficiently.

Many of these solutions provide Ables clients with the opportunity to receive revenue, and/or goodwill from the various “downstream” solutions provided. Some of these include; charitable donations, resale, liquidation, online auctions, and scrap revenue.
